

Fully integrated PTZ Dome camera with high-quality video Wireless link

JVC's new range of Wireless CCTV cameras, feature 36x optical zoom and an integrated wireless link optimised for high quality, low latency video. Made in partnership with Wavesight, Europe's leading innovator in wireless CCTV and transmission solutions, the cameras are capable of transmitting high quality video up to 20Km. The new WIR-686C range eliminates the need for costly leased lines or cable

installation.

Silent and Accurate Operation for Reliable Monitoring

Instead of a conventional belt-type mechanism, the Direct Drive Motor can greatly increase accuracy and decreasing operation noise. With an accuracy of 0.03° , it can precisely maintain preset camera positions even after frequent panning and tilting, which becomes especially important at high zoom magnifications like 36x.

MPEG-4/Motion JPEG Full-Frame Dual Stream

The WIR-686C can stream both MPEG-4 and Motion JPEG VGA images simultaneously at the full frame rate (30fps for each stream). MPEG-4 distribution is ideal where monitoring with smooth, high frame rate images is required within a limited bandwidth. Motion JPEG images are useful when you need to record images as evidence data, because of the high quality still pictures it can provide.
