Description

D-ILA 4K2K, a 4K2K D-ILA projector which delivers ultra high definition, is four times sharper than native HD. The D-ILA 4K2K has the resolution of about 10 million pixels (4900x 2400), and is an ultra-high-definition, high-contrast, high-grade JVC projector which features a newly-developed miniature ultra-high definition - 4K2K D-ILA device. Adoption of a new construction and production process results in a 6.8µm pixel pitch and a 0.25µm gap between pixels for a high aperture ratio of at least 93%. Furthermore, a 1.27-inch miniature 4K2K D-ILA device delivers high-definition display images of 9,830,400 pixels (4096 x 2400 pixels). Alongside compatibility with 4K digital cinema, the projector also offers native HD four display outputs and 4x enlarged WUXGA images for high-end design and CAD applications.

Main features

- Ultra-high-definition*1, high-contrast, high-grade projector
- User-friendly interface and excellent operability

- True black quality with high contrast ratio of 10,000:1
- Wide range of display options
- Three types of gamma table incorporated
- Convergence adjustment function incorporated

Additional features

- Flexible installation
- Small, lightweight, and stackable design
- Power requirement AC100 V to AC 240V

Technical specs

GENERAL

Please see the PDF brochure for further details.
