Description

JVC's DLA-RS10 establishes a new benchmark in performance and value. It's built with the same core technologies and many of the same features found in JVC's other highly acclaimed D-ILA projectors, and breaks new ground in brightness, contrast, color accuracy, black levels and ease of use. At the core, are three 0.7-inch 1080p D-ILA devices, a new optical system that utilizes wire-grid polarizers, and a new 2x lens with a 3 step fixed aperture. Together they produce brighter images with a stunning native contrast ratio of up to 32,000:1 . Whether this is your first projector, or an upgrade, you'll appreciate the sleek, new DLA-RS10's natural, high contrast pictures without rainbow or screen door effects seen in competitors' models

Main features

- 3 panel D-ILA light engine original JVC technology
- Wire-grid polarizers ensure native contrast ratio up to 32,000:1
- High performance 2x motorized zoom lens with auto dust cover
- 1000 lumen brightness with a three step fixed aperture
- Advanced HQV Reon-VX processor by Silicon Optix

- Ultra quiet 19dB operation
- Customized on-screen gamma control
- HDMI 1.3 interface (x2)
- Two trigger functions (screen or anamorphic lens)
